

Photo Frame

SUPPLIES AND TOOLS:

- POPTape™: Any colour/pattern.
- Old photo frame.
- Non-stick Scissors/Craft Knife.

SKILL LEVEL: Beginner

Step 1

Measure the length of tape you need to go around the edge of your photo frame. Cut or tear a length of POPTape in the colour you want to use and wrap it around the frame. Trim the edges outside of the bevelled edge to leave a clear space for the glass and backing insert to fit back into the frame when you are finished.

Step 2

Wrap the corner edges last to finish off the frame. You will need to use a craft knife to trim away the excess tape before you wrap the corners.
